Secured by Check Point

Good afternoon ACE,

Regarding the laboratory's reported issue, please see the Region's input below and let me know if you have any questions.

LAB: "This is an ongoing case where Lab is analyzing the samples for TVOA analysis. For these samples, Lab can't use the received sample for screening otherwise Lab will not have enough sample volume to perform the re-analysis and dilution analysis if required. Lab has analyzed samples BG401, BG402, BG403, BG404, BG405, BG408 for TVOA analysis. All samples are required dilution to bring target analytes within calibration range. In this case, instrument blank was not analyzed in between the samples due to continuous analytical sequence therefore lab would like to confirm that lab will report undiluted TVOA analysis without instrument blank in between the samples and further dilution analysis in final electronic deliverables. Please note that there is not any other Lab QC failure associated to this analysis. Please note that when samples do not required dilution then lab always re-analyze the sample to confirm the detected analytes concentrations.

Lab has analyzed sample BG423 & BG402 for TVOA analysis. Sample found positive with high concentration of target analytes and required dilution as you can see attached quant reports. Due to matrix interference, sample has more than three surrogates are outside the QC limits and all other surrogates are within the QC limits which confirms the matrix interference. In this case, Lab will report undiluted TVOA analysis with surrogates outside the limits and further dilution for final electronic deliverables.

Please see attached."

REGION: Please advise the laboratory to proceed and detail their rationale for any deviation from SOW direction in their SDG narrative. Thanks.

***** Please note that in order to waive/remove defects associated to this issue, please send a detailed waiver request to the appropriate ASB PM.

Thank you,

Updated Record of Communication

This ROC is being updated to provide new information regarding the replacement of the damaged sample BG437.

Good afternoon,

Issue: Regarding sample BG437, the laboratory received only one broken amber for this sample and there is no volume remaining for analysis. The laboratory would like to know how to proceed.

Resolution: Per Region 2, there will be no replacement for sample BG437. Please note the issue in the SDG Narrative and proceed with the analysis of the samples.

Please note that the laboratory may contact the appropriate CLP PM should any defects need to be waived for this issue.

Hi Christina,

Yes, since it is not required, we are **not** planning to collect volume to replace the damaged container. I apologize for the confusion.

We do still have samples left to collect (which will be completed after Thanksgiving), but they are not lab QC samples.

Thanks,

Julia Harlan

***** External Message *** -- PROBE message before clicking links or opening attachments.**

Hi Julia,

Please note MS/MSD is not required for TVOA, VOA, SVOA analyses in Region 2.

Just wanted to find out if you are still collecting volume to replace the damaged container? The reason I ask is because Daisy's email below states "Another sample will be collected to replace the damaged container for sample BG437."

Regards,

Hi Christina,

The bottle that broke was for an MS/MSD sample, and since there's no volume left to analyze, we'll collect an additional MS/MSD from one of the remaining wells in this sampling event to replace it.

Thanks,

Julia Harlan

Hi Christina,

Were two amber glasses received for sample BG437 or just one? If there is another, and 1L is an acceptable volume for analysis, the lab can just proceed with analyzing the one that is unbroken. If not, then we may need to resample for it.

Thanks,

Julia Harlan

Good afternoon,

Issue: Samples BG3R1, BG3R2, BG434 and BG435 are missing the collection time on the COCs and the sample containers. Resolution: Per Region 2, the revised COCs with the missing collection times included are attached. Please note the issue in the SDG Narrative and proceed with the analysis of the samples.

Please note that the laboratory may contact the appropriate CLP PM should any defects need to be waived for this issue.
