Hi Dean,

Apologies for the confusion, but just found out that we do not have any more grab delineation samples from AOC 7 at this point. We still have the composite samples left over, so if TOX can be run on those, we can ship those out today.

Yes, please expedite TAT. No, they were just looking for confirmation that VOCs were grabs – I am sure that is the standard protocol for Chemtech as well as everyone else!

Dean,

We can send the three TOX samples to our sub-lab for analysis today, so they should receive it by tomorrow to start the TOX. Figure you want quickest TAT possible?

We did run total VOCs on the grab samples, but no TCLP was done for these delineation samples. Is TCLP required from the facility as well?

Delaware!!? I didn't know important people lived there ☺
When do you expect we would get the three TOX samples to start?
Can you confirm that all of the TCLP VOAs are grab samples?

Glad to hear! I had a nice Thanksgiving with the family in Delaware, which also provided its own challenge when it came to getting there and back!

I'll check with the guys regarding these samples, but it's highly unlikely we still have the soil samples from July and September, as we typically dispose of samples after 2 months of storage. Will let you know ASAP.

Thanksgiving in Manalapan was nice – the only issue was getting there and back! Hope you enjoyed the long weekend with family too. Besides the 11-8-19 samples, there were also 9-11-19 (K4850) and 7-18-19 (K3887) samples. Can we get 7 TOX analyses from these? Thanks Dean

Hi Dean,

Hope your Thanksgiving was splendid! Just wanted to ask if you had the dates of the other delineation samples handy. I'd like to check with the back to see if we still have these samples around for the TOX analysis.

Dean,

It seems that only 3 soil and 2 water grab samples were collected. Attached is the COC form for reference.

Hi Dean,

Do you need the TOX analysis done on the grab samples only? We should have enough volume remaining to do so but I'll double check with the lab on Monday.

Hi Steve is there still sample volume remaining from most recent delineation sampling at AOC7 that we can use for TOX analysis? Thanks Dean

Dean: We need confirmation that TCLP VOA were collected as grabs. We Need 7 grab samples for TOX. We also need the final signed lab reports with Chain of Custody. Once received with paperwork, we can submit form u for CESP. Will send disposal quote for Thermal Dirt and TSCA dirt do you want on one quote?

Good afternoon Bob – Cuenca does not have a Delaware permit so CEP or CESP would be the best available options. Please confirm pricing so we can prepare waste profile accordingly. Thanks Dean

Importance: High

Good afternoon – Tully is commencing excavation of up to 1000 tons of soil in the next two weeks at the referenced AOC7 at Transit Authority Coney Island Railyard adjacent to a National Grid MGP site. Previous reports by PWGC identify this location as Area 21. Please let us know if the supplemental data collected by Tully's lab is sufficient for acceptance at Clean Earth Philadelphia and confirm pricing and upcoming available capacity. We are using Cuenca Trucking for transport and disposal. Thank you.
